

We are a team of Engineers, who are committed to making a significant change in the Medical Apparel industry, the quality of such **Professional** products has been compromised in many parts of the world constituting a rise in **HAI** (Hospital Acquired Infections). Even the presumed medical sector of developed countries is also at risk as well, then you may suppose the case of underdeveloped nations.

We demand standardization of quality without the segregation of boundaries, yet as a team that understands this reprehensible conduct, **Aavvie® Healthwear™** has brought in a Manufacturing and medical supply system, where the products are made for **Professionals** up all over the world, embracing quality as our trademark.

Soft, Lightweight, Breathable Materials used.

- Comfortable
- Impervious
- No itching no irritation
- Latex Free

- Breathable
- Prevent Nosocomial Infections
- Fluid Repellant
- Minimize Linting

Aavvie® Healthwear™ products are tested for and meet the AAMI Level 4 standard, European Standard: EN13795 High Performance.
-Suggested guidelines are not a substitute for clinician professional judgment and experience.

AAMI levels determined by ANSI/AAMI PB70:2012 Adopted by the U.S. Food and Drug Administration (FDA)

Testing in AAMI Level 4:

AAMI has identified American Society for Testing and Materials (ASTM) International F1671 as the key test requirement that a surgical gown must pass in order to be labeled AAMI Level 4.

ASTM F 1671- Synthetic Blood Penetration Resistance Test

ASTM International F1671: is the Resistance of Materials Used in Protective Clothing to Penetration by Blood Borne Pathogens Test. This is a pass/fail test that an AAMI Level 4 surgical gown must pass. The test method has been specifically designed for modeling penetration of HBV, HCV and HIV. Because these organisms are difficult to use, the test uses a bacteriophage, Phi-X174. Phi-X174 is one of the smallest known viruses, and it is similar in size and shape to HCV, the smallest bloodborne viral pathogen.

How it's works?

A surgical gown's material is subjected to a nutrient broth containing Phi-X174 for a specified time and pressure sequence:

1. Five min. at atmospheric pressure 2. One min. at two PSI (pounds per square inch) 3. 54 min. at atmospheric pressure

The test is terminated if visible liquid penetration occurs before the end of 60 minutes. If no visible liquid penetration is seen, then a sensitive microbial assay is performed to determine pass or fail. Any evidence of viral penetration for a test specimen constitutes a failure. If a production lot of surgical gowns passes this test in all four surgical gown critical zones, it qualifies as an AAMI Level 4 surgical gown.

Angiography

Angiography drape is used for heart disease related surgery it is constructed with two hole covered with inscise tape, other two without, and two sides of the drape with clear PE film for viewing and controlled equipment panels.

- Angiography drape is designed for femoral and radial procedures
- Impermeability and effective absorption prevents strike through and contamination
- Premium grade SMS material provide resistance and reliable quality

Made of SMS Non-Woven Fabric, Premium Quality Fabric used.

Cardiovascular

Cardiovascular drape satisfies the high requirement of cardio surgery. Drapes are available that are specially configured for the most diverse methods with incision foil, cord organizer, pouches and tubes. Cardiovascular Drapes provide the strength, versatility and efficiency needed for the critical demands of cardiovascular surgery.

- Aavvie® Healthwear™ drapes are developed to protect you and your patients and include the following features:
- · Maximum rating for flame resistance for use around lasers and other electrical instruments
- Fabric that's resistant to tearing, strikethrough and abrasion while providing secure attachment of lines and tubes
- Lower lint generation than other drapes to reduce the risk of airborne bacterial transmission
- Incise areas that secure quickly and easily to patient
- · Armboard covers for additional coverage

Central Line

A central venous catheter (CVC), also known as a central line(c-line), central venous line, or central venous access catheter, is a catheter placed into a large vein. It is a form of venous access. Placement of larger catheters in more centrally located veins is often needed in critically ill patients, or in those requiring prolonged intravenous therapies, for more reliable vascular access. These catheters are commonly placed in veins in the neck (internal jugular vein), chest (subclavian vein or axillary vein), groin (femoral vein), or through veins in the arms (also known as a PICC line, or peripherally inserted central catheters).

more defails

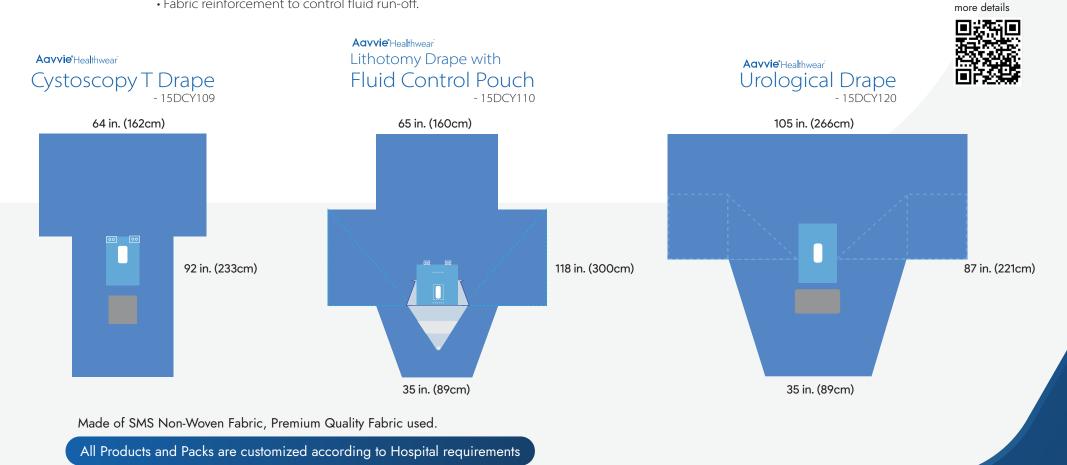

Made of SMS Non-Woven Fabric, Premium Quality Fabric used.

Cystoscopy

Specialized for the urological procedures, we offers the high performance and protection needed to stand up to the specific demands of urological procedures. **Aavvie® Healthwear™** drapes are specially designed to give you and your patients one less worries with:

- Maximum Rating for flame resistance
- Fabric that is resistant to tearing, strikethrough and abrasion
- Provides secure attachment for lines and tubes
- Low lint generation to reduce the risk of airborne bacterial transmission
- Fabric reinforcement to control fluid run-off.

General Surgery

Surgery is a medical or dental specialty that uses operative manual and instrumental techniques on a person to investigate or treat a pathological condition such as a disease or injury, to help improve bodily function, appearance, or to repair unwanted ruptured areas.

As general surgery procedures vary so much the general surgery drapes and kits used need to be adaptable and cater for the challenges likely to be met, For instance:

- · Heavy retraction during complex abdominal procedures and procedures that might require a considerable amount of time,
- · Large volumes of irrigation fluids and blood.

Neuro Surgery

The drapes are made of impermeable materials to help protect against liquid and bacteria strikethrough for the safety of the patient. Absorbent working area and fluid collection pouches help maintain a dry working area. The all-in-one design offers integrated relevant features and allow for easy and efficient draping by one person.

Made of SMS Non-Woven Fabric, Premium Quality Fabric used.

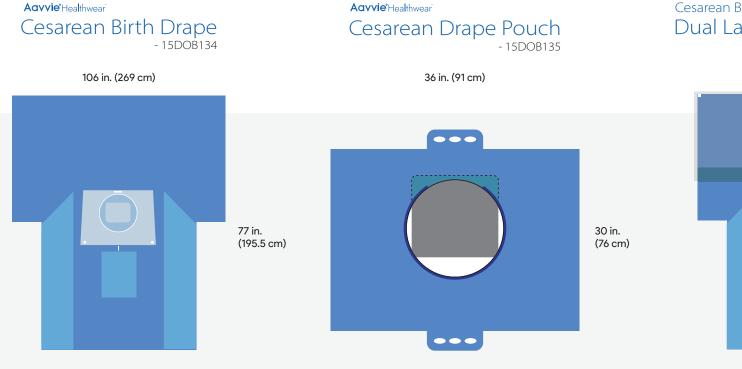

more details

Obstetrics

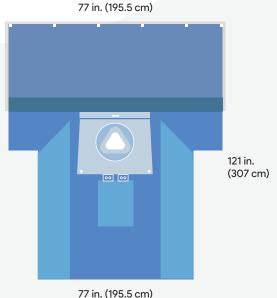

Specialized for the obstetric and gynecological procedures, we have exceptional draping products that offer effective fluid management for obstetrics, gynecological and C-Section procedures. They provide effective fluid collection with easy clean-up and disposal, while reducing the risk of staff and patient contact with blood and body fluids.

Aavvie® Healthwear™ drapes are designed to give you and your patients one less worry and include the following features:

- Maximum rating for flame resistance
- Low-lint generation to reduce the risk of airborne bacterial transmission
- Soft and comfortable fabric that resists strikethrough
- Fluid collection pouches and suction drainage for fluid disposal

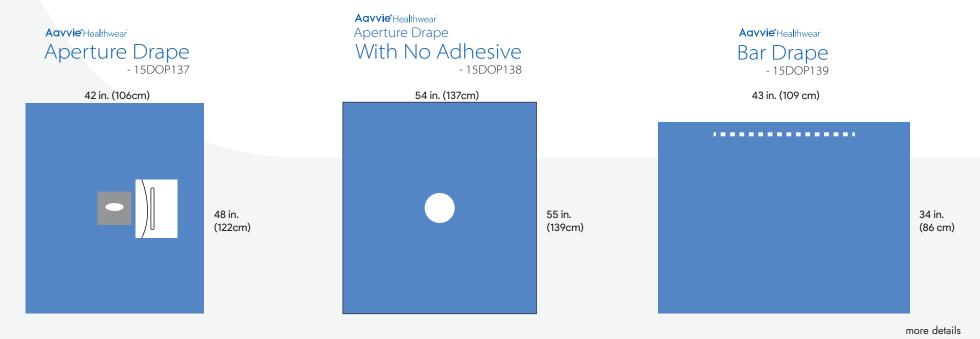

Ophthalmology

Specialized for the above-the-shoulders surgery, we have flexible draping systems that offer enhanced fluid control and increased patient comfort in ophthalmic, neurological and other surgeries involving head and neck.

Aavvie® Healthwear™ drapes are designed to give you and your patients one less worry and include the following features:

- · Maximum rating for flame resistance
- Eye drapes designed with a unique, U-shaped, fluid-containment pouch that helps reduce exposure during phacoemulsification and other fluidintensive procedures and may be used for the left or right eye
- Low-lint generation to reduce the risk of airborne bacterial transmission
- Product offerings include full or fenestrated incise

Custom Programme

Customizing your product is easier than you thought; we'll do all the chores. Let you be from any part of the World, we are here to make it for you.

Aavvie® Healthwear™ Custom Programme provides you an opportunity to choose and make what you exactly need. Unlike other manufacturers where the products are made considering general cause, Aavvie® gives priorities to individuals. We know that people differ from place to place, country to country, region to region. We plan to make products to match each ethnicity.

Often Health Professionals complain about fitting and discomfort while they don their apparels, we could circumvent this by having custom apparel for them.

To know more about Aavvie® Healthwear™ Custom Programme visit our website.

more details

How we do it •

Research & Study

- Detailed study of the application of the product.
- Get suggestions and experience from doctors.

Design

- Make changes to products and check whether the product satisfies the application.
- Try different designs for products.
- Confirm the changes, and resolve the issues.

Monitor

- Ensure the product can pass the quality tests.
- Make prototypes and send them for testing.

Testing

• The product goes for Particular tests based on AAMI Level.

Final Product

- Our final product is ready to launch.
- We list in our product list.

Fore more products visit our website
